Fast Solutions

Driver and Vehicle Services Software

FAST Approach to System Modernization

Fast Enterprises (FAST) was founded in 1997 on the belief that there is a better way to deliver government systems. The key to realizing that vision is software that incorporates best practices and can be readily adapted to meet unique agency needs. Today, FAST is recognized as a leader in providing government software and services to agencies that administer programs for motor vehicle license and registration, tax and revenue, and unemployment insurance.

Throughout our company's history, we have served as the software developer/provider, system integrator, solution implementer, and product-support vendor for our clients' enterprise-modernization projects. This full-service approach allows us to expedite successful project delivery and is a significant factor in the highly positive relationships that we have with all our client agencies.

Our FastDS-VS® software for driver licensing and control and vehicle titling and registration is based on the FAST core software architecture that is in production for over 50 agencies. This proven architecture is the foundation for our commercial off-the-shelf (COTS) software products, allowing them to be flexibly configured—rather than custom coded—to meet unique agency requirements. FastDS-VS is an internally integrated application that does not depend on third-party applications for core functions.

Our streamlined FAST Implementation Methodology and experienced project teams work on-site to leverage the out-of-the-box functionality of our software to deliver projects on time and on budget. From the onset of our projects, FAST and agency project personnel work hands-on with FastDS-VS to collaboratively define, configure, and test functionality that is tailored to meet specific agency needs. Rather than creating documents that describe the contemplated system, integrated tools allow project personnel to iteratively plan, track, and document the implementation as the software is being configured. The result of this approach is a system that meets agency needs, with integrated documentation and effective knowledge transfer to agency personnel.

FastDS-VS

FAST: When Failure is not an Option

Every FastDS-VS software implementation project, has been delivered on time and on budget. In the past five years, we have successfully implemented FastDS-VS for driver services and/or vehicle services for more state agencies than any other vendor. We have successfully converted hundreds of millions of records from a variety of legacy systems, trained thousands of users, and interfaced with hundreds of partner systems, including AAMVA systems.

This proven ability to deliver, combined with our highly configurable software architecture, streamlined methodology, and experienced on-site project professionals, has made FAST the premier choice for enterprise system modernization. With FAST, clients can count on success, because failure is not an option.

Modernization for Today and Tomorrow

FastDS-VS is designed to serve the motor vehicle customers of today and tomorrow. The integrated and web-based software allows agencies to enhance customer service through omni-channel engagement, whether it be online, at a service center, through a dealership, or from a range of new locations and technology platforms.

Our FAST Development Center regularly releases software service packs and version upgrades to provide perpetually modern solutions that empower business innovation and technological advancement. FastDS-VS essentially eliminates system obsolescence and the risk associated with unnecessary and costly replacement projects. Although we have replaced many legacy systems since our first project almost 20 years ago, our software has never been replaced. Every FAST client since our inception is a client to this day.
